r417187 | brnrd | 2016-06-21 15:14:41 +0900 (2016/06/21 ( )) | 13 lines

mail/fetchmail: Fix build without SSLv3

  - Fix build with OpenSSL 1.1 and LibreSSL
  - Stop using pkg-install/pkg-deinstall scripts
  - Use pkg-plist keywords
  - Use GSSAPI ports framework
```

```
  - Change X11, POP2 options to use options framework

r415811 | mandree | 2016-05-25 05:32:55 +0900 (2016/05/25 ( )) | 15 lines

Disable SSLv2, to fix new/from-ports OpenSSL builds.

Newer and ports-based builds define the SSLv2_client_method() in the
headers unless OPENSSL_NO_SSL2, or, depending on version,
OPENSSL_NO_SSL2_METHOD is defined, however newer OpenSSL versions in
FreeBSD no longer provide the implementation in the library.

Preload the autoconf (configure) cache to pretend SSLv2_client_method()
were universally _un_available, effectively disabling SSLv2 altogether.

PR:            209596
