

# Python で呼び出す例

The screenshot shows the AssistantSeika software interface. On the left, there is a table of voice actors (VOICEROID2) with columns for '製品' (Product), 'PF' (Platform), 'cid', and '話者' (Voice Actor). The table lists various voice actors and their corresponding product IDs and platform information. Below the table, there are settings for 'effect' and 'emotion'.

In the center, a command prompt window shows the execution of a Python script: `F:\AssistantSeika\sandbox>python sample.py` and `F:\AssistantSeika\sandbox>`.

On the right, an EmEditor window shows a Python script named `sample.py` with the following code:

```
import subprocess
cmd = 'seikasay2.exe -cid 2001 -t 西ちゃんかわいいって言って'
subprocess.call(cmd, shell=True)
```

subprocessモジュールで SeikaSay2.exe を呼び出します。
